

## WCU's Center for STEM Inclusion is Launching a Sector Analysis Survey Throughout Southeastern Pennsylvania: Preparing Today's Youth for Tomorrow's STEM Workforce

As technology accelerates and industries rapidly transform, an alignment needs to occur between the skills today's students are acquiring and the competencies tomorrow's employers will be demanding. West Chester University's (WCU) Center for STEM Inclusion has launched a regional sector analysis survey to gather real-time input from industry leaders on the specific workforce needs that will shape the next generation of employees and innovators in southeastern Pennsylvania.

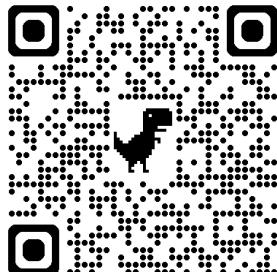

We are particularly interested in hearing from employers in the following STEM-related sectors:

- Technology
- Engineering
- Healthcare
- Biotech/Pharma
- Energy/Utilities
- Manufacturing

We also welcome insights from other STEM-aligned industries. The survey is part of a broader effort to ensure that middle and high school students across the region—especially those from low-income communities—are equipped with the knowledge, skills, and educational pathways necessary to meet future workforce demands. Your input will help guide regional programming and career exposure efforts, enabling students to prepare more effectively for high-opportunity careers in STEM.

More information about the survey as well as the survey itself can be found using the QR codes below.
